

flathouse

FH 6 G2

: product card

Flathouse acoustic booths are perfect for hybrid work environments – they provide a comfortable space for online meetings, quick team huddles, brainstorming sessions, or phone calls without disturbing others in the office.

In addition to their effective internal sound insulation, Flathouse booths also contribute to improving the overall acoustics of the workspace. Their exterior panels are filled with acoustic fiber, turning the booths into additional sound-absorbing elements within the office environment. This thoughtful design significantly enhances acoustic comfort, particularly in open-plan office settings.

collection advantages

more space for effective meetings

The six-person Flathouse booth is the perfect solution for modern open space environments, where there is often limited room for team meetings or brainstorming sessions with larger groups. It creates an environment that promotes focus and collaboration, while effectively isolating users from surrounding noise. With its integrated ventilation system, the booth ensures a constant supply of fresh air and high user comfort, even during longer meetings with all seats in use.

enjoy the silence

Flathouse provide comfort and privacy in any workspace. Equipped with sound-absorbing panels and high-quality materials, it effectively reduces external noise, creating the perfect environment for focused conversations and short meetings. The acoustic insulation is optimized to minimize sensory overload and dampen ambient sounds, while still allowing essential signals- such as alarms- to be heard.

additional sound-absorbing surface

Flathouse acoustic booths are available with two types of exterior panels: upholstered or made from natural oak boards. The upholstered panels significantly improve the acoustics of the room by absorbing ambient noise. Placing an upholstered booth in a space offers more than just an additional meeting area - it also serves as an effective sound-absorbing element. **In fact, a single acoustic booth provides sound absorption equivalent to that of thirteen Selva Free panels.**

technical data

FH 6 G2

Standard ●
Option ○

Base

Powder coated metal frame, black color (structure)	●
Hinges, fittings and door handle in black	●
Acoustic foil on glass	●
Occupancy system at the front and back of the booth	●
Acoustic seals	●
Built-in transport wheels for easy relocation of the booth	●
