treehouse THS 2

design:
Bejot Development Team

Two-person Treehouse booth designed to provide suitable conditions for quiet conversations and short meetings.

Treehouse is an acoustic booth designed with comfort and privacy in mind, suitable for any space. The sound-absorbing panels and high-quality materials effectively reduce external noise, providing ideal conditions for quiet conversations and short meetings. The acoustic insulation has been optimized to minimize excess stimuli and suppress ambient noise while still allowing the reception of essential signals, such as alarms.

XH ST

1.A external upholstered panels
available in a variety of fabrics in a wide range of colors

1.B external wooden panels
oak planks in natural color

2 internal upholstered panels
available in a variety of fabrics in a wide range of colors

3.A upholstered rear wall
available in a variety of fabrics in a wide range of colors

3.B rear wall made of acoustic safety glass

4 floor
• acoustic felt carpet, dark gray
○ oak planks, natural color

5 tabletop (700x460)
height 705 mm / 1100 mm
○ laminated board
○ finger joint solid oak wood

6 multimedia panel
• upholstered in fabric of internal panels
○ preparation for 32" TV mounting

7 media port
○ three-module media port mounted in the multimedia panel above the tabletop

8 system audio
○ audio system with mono amplifier and Bluetooth® control (mounted in an invisible place in the multimedia panel)

9 frame made of metal, powder-coated in black
• available in black or white (structure)
○ Studio Design colors

10 hinges, fittings and handle made of metal, powder-coated in black

11 occupancy system at the front and back of the booth

12 cable grommets in the roof panels
○ prepared for the installation of fire safety equipment

13 freestanding stool with height adjustment for a tabletop at 1100 mm

14 2x single-seat armchair for a tabletop at 705 mm

• standard ○ option

equipment

booth occupancy system (standard)

A system located at the front and back of the booth, activated by a built-in motion sensor, indicating the booth's occupancy during use. Once the fans have completed their operation and the air has been refreshed, the booth is ready for use again.

acoustic glass (standard)

Transparent, acoustic, and safety glass with acoustic seals. Made of laminated glass with four layers of anti-vibration film. In the event of breakage, the shards remain stuck to the film, minimizing the risk of injury. The film also serves as a sound barrier, enhancing the acoustic properties of the glass. In the G1 version, the glass is only at the front of the booth, while in the G2 version, it is at both the front and the back.

Glass thickness: 8.5 mm. Width of the tempered glass door: 810 mm.

130m³/h

ventilation (standard)

An efficient ventilation system utilizing quiet fans with an airflow of approximately 130 m³/h. The air volume is optimized to ensure the user's comfort. The system is fully automatic and safe to use.

Ventilation function – after leaving the booth, the ventilation will continue to operate for an additional 3 minutes to ensure comfort for the next users.

ceiling lighting (standard)

Efficient, energy-saving LED lighting, automatically activated by a motion sensor, with adjustable light intensity.

Two LED lamp integrated into the ceiling panel, light color 4000 K, brightness 2x216 lm, powered by a 12 V mains connection.

touch panel (option)

Touch panel for 4-level adjustment of ventilation and lighting. Installation location: above the tabletop, or at a height of 850 mm/1250 mm from the floor if no tabletop is installed.

audio system (option)

AUDIO – Mono audio system with an amplifier and Bluetooth control, mounted in a concealed location.

leveling feet (standard)

Leveling feet that ensure stable positioning of the booth.

transport wheels (standard)

Built-in transport wheels that make moving the booth easier. Thanks to the wheels, only one person is needed to move the booth. To stabilize and level the booth, lift the transport wheels and lower the leveling feet. To adjust the feet, remove the black plugs located in the floor and use a 7 mm socket wrench or flat screwdriver to raise or lower the feet to the desired height.

preparation for TV installation (option)

TP – preparation for mounting a 32" TV: grommet, cable grommet (bracket, HDMI cable and mounting by customer).

preparation for fire protection equipment installation (option)

Prepared for the installation of fire protection devices such as speakers and sensors.
Cable pass-throughs with a diameter of 25 mm prepared in the roof panels (both internal and external).

electrical installation (standard)

Safe electrical installation. Components based on the 12 V standard. Includes a 2.5 m power cable (plug type E – Poland/France, type F – Germany, type G – United Kingdom).

media port mounted in the multimedia panel above the tabletop (option)

if there is no table, the media port is mounted at a height of 850 mm or 1250 mm

E3VACR (option)
media port with three sockets:
230 V / USB A + C / RJ, with a power output of 22 W

E3VACH (option)
media port with three sockets:
230 V / USB A + C / HDMI, with a power output of 22 W

E3VACV (option)
media port with three sockets:
230 V / 230 V / USB A + C, with a power output of 22 W

E3VACHR (option)
media port with three sockets:
230 V / USB A + C / HDMI + RJ, with a power output of 22 W

E3VACAC (option)
media port with three sockets:
230 V / USB A + C / USB A + C, with a power output of 22 W

acoustic Information

reduction of speech noise level

according to: ISO 23351-1:2020

The noise level of a conversation held by a person inside the Flathouse booth is reduced by half (in dB), while the perceived noise reduction is up to sixfold!
This ensures the confidentiality of conversations held inside the booth.

*55 dB -> 29,4 dB ≈ 6-fold reduction in perceived sound volume from inside the booth

** Research results conducted for the THS 2 G1 + 2x XH SF 2 booth.

acoustic insulation of the booth

according to standards: PN-EN ISO 11957:2010 and PN-EN ISO 717-1:2013

Optimal acoustic insulation enhances comfort and work efficiency, facilitates conversations and video conferences, reduces fatigue, and limits excessive stimuli.

*55 dB -> 24 dB ≈ 9-fold reduction in perceived sound volume from outside the booth

** Research results conducted for the THS 2 G1 + 2x XH SF 2 booth.

sound absorption coefficient

according to standards: PN-EN ISO 11654:1999 and PN-EN ISO 354:2005

The upholstered panels of the Treehouse booth, compared to most booths on the market (typically finished with hard, highly sound-reflective materials), are filled with special acoustic felt. This material reduces the number of sound reflections in the room, thereby lowering the noise level in the office. The Treehouse acoustic booth, in its externally upholstered version, improves the acoustic conditions of the room in which it is placed. It introduces approximately 5,6 m² of sound-absorbing surface.

$$\alpha_w = 0,65(MH)$$

coefficient

sustainable development

Flathouse booths have been designed with durability and minimal environmental impact in mind.

98%

the materials of the THS 2 G2 booth are recyclable

The THS 2 G2 model is made from materials that can be recycled after the end of their use. This is a practical way to reduce waste and give materials a second life.

less waste at the design stage

Before the final product is created, we focus on minimizing waste and selecting materials with a low environmental footprint. The booth's components are easy to disassemble and sort, facilitating further recycling.

responsible sourcing

The wooden elements used in our products come from suppliers certified by FSC or PEFC, which confirm compliance with international standards for responsible forest management, considering environmental, social, and economic factors.

material composition

The percentage of each material's mass in the Treehouse THS 2 G2 booth.

acoustic test results

speech noise level reduction

weighted acoustic insulation index

Absorption of Treehouse external panels

| Tested parameter | Speech level reduction $D_{S,A}$ | Sound insulation performance of the booth $D_{P,W}$ | Sound absorption coefficient α_w |
|--|---|--|---|
| Result for Treehouse acoustic booth | 25,6 dB (class B) | 31 dB | 0,65 (Mh) |
| Recommended value | ≥ 25 dB | ≥ 28 dB | $\geq 0,3$ |
| Explanation | The higher the value, the less audible the conversation in the booth. | The higher the value, the better the external noise reduction. | The higher the value, the greater the noise and reverberation reduction in the room where the booth is. |
| Standard | ISO 23351-1:2020 | PN-EN ISO 717-1:2013 | PN-EN ISO 354:2005 ISO 20189:2018 |

The results for THS 2 G1 + 2x XH SF 2.
