Four-person Flathouse booth – the perfect solution for creative meetings in open-space environments.

Flathouse is an acoustic booth designed with comfort and privacy in mind, suitable for any work-space. The use of sound-absorbing panels and high-quality materials effectively reduces external noise, creating the ideal setting for quiet conversations and brief meetings. The acoustic insulation has been optimized to both minimize excessive stimuli and dampen ambient sounds, while still allowing important signals – such as alarms – to be heard.

12 cable grommets in the roof panels
○ prepared for the installation of fire safety equipment

13 2 x two-person sofas designed for a 705 mm table height

• standard ○ option

equipment

booth occupancy system (standard)

A system located at the front and back of the booth, activated by a built-in motion sensor, indicating the booth's occupancy during use. Once the fans have completed their operation and the air has been refreshed, the booth is ready for use again.

acoustic glass (standard)

Transparent, acoustic, and safety glass with acoustic seals. Made of laminated glass with four layers of anti-vibration film. In the event of breakage, the shards remain stuck to the film, minimizing the risk of injury. The film also serves as a sound barrier, enhancing the acoustic properties of the glass. Made of laminated glass. In the G1 version, the glass is only at the front of the booth, while in the G2 version, it is at both the front and the back.

Glass thickness: 8.5 mm. Width of the tempered glass door: 810 mm.

260m³/h

ventilation (standard)

An efficient ventilation system utilizing quiet fans with an airflow of approximately 260 m³/h. The air volume is optimized to ensure the user's comfort. The system is fully automatic and safe to use.

Ventilation function – after leaving the booth, the ventilation will continue to operate for an additional 3 minutes to ensure comfort for the next users.

ceiling lighting (standard)

Efficient, energy-saving LED lighting, automatically activated by a motion sensor, with adjustable light intensity.

Four LED lamp integrated into the ceiling panel, light color 4000 K, brightness 4x216 lm, powered by a 12 V mains connection.

touch panel (standard)

A touch panel for 4-level adjustment of ventilation and lighting. Installation location: above the tabletop or at 850 mm height from the floor if no tabletop is installed.

audio system (option)

Mono audio system with an amplifier and Bluetooth control, mounted in a concealed location.

leveling feet (standard)

Leveling feet that ensure stable positioning of the booth.

transport wheels (standard)

Built-in transport wheels that make moving the booth easier. Thanks to the wheels, only one person is needed to move the booth. To stabilize and level the booth, lift the transport wheels and lower the leveling feet. To adjust the feet, remove the black plugs located in the floor and use a 7 mm socket wrench or flat screwdriver to raise or lower the feet to the desired height.

preparation for TV installation (option)

Preparation for mounting a 32" TV: grommet, cable grommet (bracket, HDMI cable and mounting by customer).

preparation for fire protection equipment installation (option)

Prepared for the installation of fire protection devices such as speakers and sensors.
Cable pass-throughs with a diameter of 25 mm prepared in the roof panels (both internal and external).

electrical installation (standard)

Safe electrical installation. Components based on the 12 V standard. Includes a 2.5 m power cable (plug type E – Poland/France, type F – Germany, type G – United Kingdom).

media port mounted in the multimedia panel above the tabletop (option)

if there is no table, the media port is mounted at a height of 850 mm

E3VACR (option)
media port with three sockets:
230 V / USB A + C / RJ, with a power output of 22 W

E3VACH (option)
media port with three sockets:
230 V / USB A + C / HDMI, with a power output of 22 W

E3VACV (option)
media port with three sockets:
230 V / 230 V / USB A + C, with a power output of 22 W

E3VACHR (option)
media port with three sockets:
230 V / USB A + C / HDMI + RJ, with a power output of 22 W

E3VACAC (option)
media port with three sockets:
230 V / USB A + C / USB A + C, with a power output of 22 W

acoustic Information

acoustic insulation of the booth

Flathouse is an acoustic booth designed with comfort and privacy in mind for any workspace. The use of sound-absorbing panels and high-quality materials effectively reduces external noise, creating an ideal environment for quiet conversations and short meetings.

The acoustic insulation is optimized to both limit excessive stimuli and dampen ambient sounds while still allowing important signals, such as alarms, to be heard.

reduction of speech noise level

In dynamic work environments such as offices or coworking spaces, brainstorming sessions are an essential part of creativity and innovation. Unfortunately, intense discussions often disturb the peace of others nearby. Flathouse acoustic booths provide a solution by allowing even the liveliest conversations without affecting the comfort of others at work. The volume of speech inside the Flathouse booth is effectively reduced. Thanks to Flathouse booths, every team can collaborate freely without disrupting those around them.

sound absorption coefficient

according to standards: PN-EN ISO 11654:1999 i PN-EN ISO 354:2005

The upholstered panels of the Flathouse booth, compared to most booths on the market (typically finished with hard, highly sound-reflective materials), are filled with special acoustic felt. This material reduces the number of sound reflections in the room, thereby lowering the noise level in the office. The Flathouse acoustic booth, in its externally upholstered version, improves the acoustic conditions of the room in which it is placed. It introduces approximately 12 m² of sound-absorbing surface.

$$a_w = 0,65(MH)$$

sustainable development

Flathouse booths have been designed with durability and minimal environmental impact in mind.

97%

the materials of the FH 4 G1 booth are recyclable

The FH 4 G1 model is made from materials that can be recycled after the end of their use. This is a practical way to reduce waste and give materials a second life.

less waste at the design stage

Before the final product is created, we focus on minimizing waste and selecting materials with a low environmental footprint. The booth's components are easy to disassemble and sort, facilitating further recycling.

responsible sourcing

The wooden elements used in our products come from suppliers certified by FSC or PEFC, which confirm compliance with international standards for responsible forest management, considering environmental, social, and economic factors.

material composition

The percentage of each material's mass in the Flathouse FH 4 G1 booth.
